## DETAILED ACTION

### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows: In claim 20 line 3, delete "engaged" and insert --bending--.

### *Election/Restrictions*

2. Claims 1-3, 6, and 13-16 are allowable. The restriction requirement between the species, as set forth in the Office action mailed on November 16, 2006, has been reconsidered in view of the allowability of claims to the elected invention pursuant to MPEP § 821.04(a). **The restriction requirement is hereby withdrawn as to any claim that requires all the limitations of an allowable claim.** Claims 4, 5, 7-12, and 17-21, directed to the alternative embodiments of the second actuator, the rotatable element, and the first and second arms are no longer withdrawn from consideration because the claim(s) requires all the limitations of an allowable claim.

In view of the above noted withdrawal of the restriction requirement, applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Art Unit: 3682

Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

***Allowable Subject Matter***

3. Claims 1-21 are allowed.

4. The following is an examiner's statement of reasons for allowance: There is no teaching or suggestion in the prior art of the claimed combination having a rotary cam supported between first and second arms and movable between a bending and a released position, a failsafe device for moving the rotary cam to the bending position when the first actuator fails to move the rotary cam to the bending position, the failsafe device comprising a rotatable element supported between the first and second arms, and a second actuator applying force directly to the rotatable element for moving the rotary cam to the bending position; re claim 13, a second actuator biasing the rotary cam toward the bending position for ensuring the rotary cam moves to the bending position regardless of a condition of the first actuator.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
